NEAI Studio LAB prerequisites

Mandatory steps:

- PC or laptop running the 64-bit version of Windows® 10, with administrator rights for software and driver installation, NanoEdge AI Studio installed, download here
- NanoEdge AI Studio license activation troubleshooting is explained here (as first action, follow chapter 2, option 1 of article)
- Download workshop repository here and then extract on your PC
- 2 x microUSB cables (to be used with: STWIN board and ST-Link debugger). One of them should be at a long one (about 100cm or longer) as it is needed to connect STWIN and moving the board by hand during hands-on
- STWIN Starter Kit: STEWAL-STWINKT1B

Optional steps to practice sw example LAB01 after the workshop:

- Download and install STM32CubeIDE , see also UM2609 documentation
- Download STM32CubeL4 library and add (Help→Manage Embedded Software Packages) to STM32CubeIDE, see UM1718 manual for details (chapter 3.4.3: „Installing STM32 MCU packages”)
- Prepare console sw you prefer: TeraTerm, Termite or similar one
